EXPERIENCE

Moody's Analytics

Assistant Product Consultant-I

Gurugram, India

Feb 2024 - Present

- **REST API Integrations:** Built a **C# automation** in **Moody's Credit Lens** that **auto-generates 13 reports**, packages them into categorized ZIPs, and delivers them to the **external KRS platform** via a **resilient REST integration (bearer-token authentication, multipart upload, auto-retry)**, saving **around 15-20 minutes** per approval process..
- **Automatic Data Validation Platform:** Designed and **built a full-stack web application** that **auto-validates client CSV files** (structure, required fields, duplicates, configurable data-type rules) before Credit Lens Import—instantly flagging errors for client correction. Cut per file validation from hours to minutes and reduced the overall turnaround time by **around 90%**, accelerating delivery by integrating AI-assited development into the build and test workflow.
- **Engineered Complex BPMN Workflows:** Developed client-specific BPMN workflows and business rules using **Camunda Modeler**, **C#**, and the **.NET** framework, automating complex validation processes and reducing manual data entry by an estimated **40%** for clients.
- **Custom Data Extract:** Leveraged **PostgreSQL** to perform complex data extraction and analysis from the **Credit Lens** backend. Generated custom reports and provided **actionable insights**, which were used to inform **strategic decisions** for **5+ key clients**.

EDUCATION

Amity University

Bachelor of Technology in Computer Science; **CGPA: 9.01**

Noida, Uttar Pradesh

Sept 2020 - Jun 2024

SKILLS

Languages:	C#, Java, C/C++
Frameworks:	.NET, LINQ, Camunda BPMN
Databases:	PostgreSQL, MongoDB, MySQL
Backend & Integration:	REST APIs, OAuth, HttpClient, Async Programming
Tools:	Git, GitHub, Linux, YAML
Developer Productivity:	AI-assisted software development, code generation, debugging and documentation

PROJECTS

External Entity Integration Platform (Banking Domain) | C#, .NET, LINQ, REST APIs, OAuth

- Architected a secure communication layer using **HttpClient** to consume external **Core Banking System (CBS)** APIs. Implemented a robust **token-based authentication** flow to dynamically retrieve and inject **Bearer tokens** into request headers.
- Engineered a **strongly-typed** data mapping layer using **Newtonsoft.Json** to deserialize complex responses into internal **Domain Models**. Implemented defensive coding for **null-safety** and data type mismatches.
- Optimized application throughput by implementing **Async Programming Patterns** for all **I/O-bound** external calls, preventing thread blocking.

SmartLink | Twilio API, Arduino, C++, Node MCU

[\[GitHub\]](#)

- A hardware and software-based **Home Automation System** to control switches via a **web server** running on an ESP module, accessible through private IP.
- **Twilio's API** service enables users to send messages through **WhatsApp** to control the Wi-Fi enabled switch and receive **real-time status** updates.

ACHIEVEMENTS & LEADERSHIP

- **App Development Mentor:** Led a **6-week App Dev bootcamp** for **30+ students** at **IGDTUW**. Delivered **8 interactive sessions** on **Flutter** concepts like **state management** and **Firestore integration**.
- **Guest Instructor for Cloud Computing:** Mentored & guided **50+ students** on cloud computing concepts, including **Client-Server Architecture** and **Virtualization**; led practical **workshops** on these concepts.
